PROFILE

Final-year BSc (Hons) Applied Computing student specialising in Forensics & Cybersecurity, graduating in 2027. Seeking graduate opportunities in cybersecurity, digital forensics or software engineering, with hands-on experience in security labs, full-stack web development, Java algorithms and Android applications.

EDUCATION

South East Technological University, Waterford | 2023–2027 (expected)

BSc (Hons) Applied Computing – Forensics & Cybersecurity. Relevant practical work includes digital/network forensics, operating-system security, programming and algorithms.

TECHNICAL SKILLS

Security & forensics: Wireshark, Autopsy, The Sleuth Kit; disk imaging, file-system analysis, log analysis, data recovery, Windows/Linux system hardening.

Languages: C, Java, Python, Kotlin, JavaScript, TypeScript, SQL, Bash; exposure to R, HTML and CSS.

Frameworks & tools: React, Node.js, Express, MongoDB/Mongoose, REST APIs, JWT, JavaFX, Android SDK, Git/GitHub, Maven, JUnit.

Platforms: Linux (including Red Hat), Windows, Android; networking fundamentals and Cisco Packet Tracer.

SELECTED TECHNICAL PROJECTS

Full-stack Movies Application | *React, Express, MongoDB, JWT* | GitHub

Developed a React frontend and REST API with login, protected user routes, reviews, favourites and playlists; modelled user-specific data in MongoDB.

Vienna Metro Route Planner | *Java, JavaFX, Graph Algorithms* | GitHub

Built a JavaFX route planner with station data loaded from CSV; implemented BFS, DFS and Dijkstra pathfinding with route restrictions and transfer penalties.

ConflictGlobe Android App | *Kotlin, Android, JSON* | GitHub

Created an Android application to record, edit, search and filter conflict data, with local JSON persistence, field validation and model unit tests.

Cross-platform Input Monitoring Research | *C, Windows/Linux/macOS APIs* | GitHub

Implemented an educational keyboard-event monitoring proof of concept to investigate OS-specific input handling, privileges and privacy implications in authorised testing.

Digital Forensics & Hardening Labs | *Autopsy, Sleuth Kit, Windows/Linux*

Analysed forensic disk images for recovery and investigation, and practised system hardening and vulnerability-reduction techniques in lab environments.

EXPERIENCE & LEADERSHIP

Line Operator | Abbott Vascular | 2022–2023

Worked accurately in a regulated manufacturing environment, following processes and supporting team-based production.

Cub Scout Leader | Volunteering | Seven years

Supported and mentored young people through group activities, developing communication, teamwork, organisation and responsibility.

ADDITIONAL TRAINING & INTERESTS

Red Hat System Administration I (RH124), v9.0 – completed course. Additional interests: practical PC/laptop and console repair, cybersecurity research and fitness.
